# Reusable Tension Stand Instructions Elephant Banner Board 

## 12-16 Teams x 18 Rounds

step Seperate pieces by size and type. Note that some are very similar in length.
step Create legs. Connect two 12 " (b) with $\mathrm{T}(\mathrm{f})$. Attach end caps(i). Insert vertical legs(a) into remaining opening of $\mathrm{T}(\mathrm{f})$. Repeat. Set
2 legs aside.
Create draft board frame. Notice that all 3 vertical bars are identical (or very close) to the height of your draft board. Connect two of the vertical bars(e) with one $\mathrm{T}(\mathrm{f})$ and $\mathrm{L}(\mathrm{g})$ connect third vertical bar with $2 \mathrm{~T}(\mathrm{f})$ which will be the middle support. Attach the middle support to the other pieces with remaining base. Make sure that identical cross bars are on the same side.
The middle support will be off-center.
4 Place board frame on top of legs. Straighten where needed make sure all connectors are snug.
5 step Attach draft board to frame using tension bands (j) to hold the board. Wrap band around tube and through the loop. Then insert barb through back of grommet. See Fig. 1. Use two bands on on all corners and one band on the sides. The draft board can be mounted by one person but an additional person will make it easier.
*If board is not taut, loop the tension band back around to get extra tension. DO NOT use excessive force as this could rip board. *Depending on size of draft board, the middle support bar may be in a different location or not included.
*Larger stands may have a slight sag in the middle, but you should still be able to use it without problems.
